

MONEY SMART TEEN ESSAY

By: Justyn West

If I had 25,000 dollars from an investor, what would I do in the community? I would put in a tech store that could repair and sell various forms of electronics like phones, computers, tablets, virtual reality headsets and monitors. Now how would we as a community do that for 25,000 dollars?

The reason why we need this is because our main tech seller in the community was Walmart. Walmart sold everything from paper towels to gaming supplies for pc gamers and I am going after one specific niche; but let's be honest, there are few people who don't use some form of technology in their lives today. And if a Clinton resident breaks his device and doesn't know how to fix it, they have to travel to Bloomington, Decatur or further to get their technology repaired for a very expensive price. I would offer it would be inexpensive in comparison to fixing your device compared to sending it into Apple or any other company for repairs or purchasing a replacement. Also, you could purchase devices like tablets, phones, laptops, desktops, consoles, pc parts, vr headsets, and there would be an area to build your pc with support if you are a first time builder.

Why should we have a tech store in DeWitt County?. Well I believe that it would save hundreds of dollars in travel expenses for our residents and provide jobs and work experience for people in DeWitt County. It would provide our community with the convenience of having your tech right now instead of having to wait for it come in the mail. Also, a service business offering tech support could draw customers into our community to spend their money. Again, it is important that our residents will see savings of hundreds of dollars a year in gas instead of having to go out of DeWitt County and that they can get their device repaired within a timely

manner being able to pick up their device while at the same time not being late for work and having lunch. This is why I believe we should get a tech store in DeWitt County.
